Part number: WINALP 2400

Technical sheet

Software utilisation:

- The software is the essential tool for the configuration and the data analysis of the instrument ALPTEC2444 et 2333.
- WINALP 2400 allows downloading automatically the data with one server. The storage is made in a data base architecture.
- With the software it is possible to have a global overview of the power quality but it is also possible to analyse a waveform.

The Alpes Technologies benefits:

- It is possible to create automatically EN50160 reports
- It is possible to export the data to excel or word format
- For the automatic task, the software suite offers a server application in order to plan automatic downloads and automatic reports

Commercial proposal:

- Software installation for one computer (OS: XP, VISTA, Seven)
- Getting started with the software
- First year: licence included
